

Flexible Machine Gun Facing

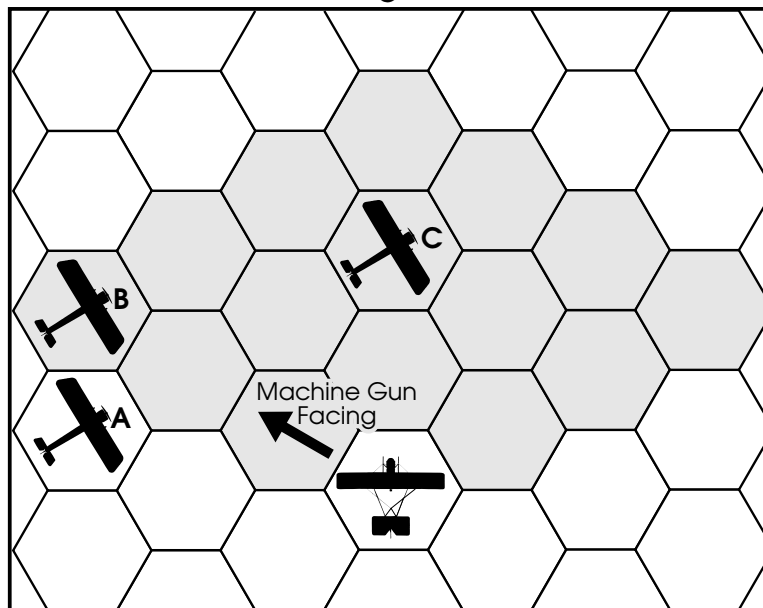

▲ Machine gun facing

Use the above Fire Template in conjunction with the actual machine gun fire templates. This represents the maximum fire arc of a flexible machine gun at its current hex facing.

Example: A Vickers FB5 "Gunbus" is attempting to fire upon three Fokker E-III's

▲ Aircraft's front facing

The Vickers FB5 has its flexible machine gun facing the 10'Oclock position. From this position the aircraft may fire at Aircraft B, at range 3. However, neither Aircraft A or Aircraft C may be fired upon. The Fire Template that the Vickers FB5 uses is Fire Template #7, and Fire Template #7 shows that aircraft A is out of arc. Aircraft C may not be fired upon because it is not within the "Flexible Machine Gun" Fire Template, even though it is within Fire Template #7's fire arc.
